

STEP 01

Get In Touch... Get It Tested

Let us know how we can help.

We can usually provide a removal quote based on your measurements, photos or reports. If you need testing or a survey completed, we will book a prompt time with you that suits.

While we are on site for the testing, we will measure up in case the result is positive, so that we may give you a fast quote for the removal work.

STEP 02

If It's Positive...

Following your contact with us, or our site visit, we'll provide you with a quote which includes:

- ✓ **Labour** - For the removal work including workers and supervisors
- ✓ **Disposal** – Correct disposal to a certified landfill
- ✓ **Equipment** – Consumables, PPE, Negative Air Pressure Unit and other machinery needed for your specific job
- ✓ **Transparency!** - We'll tell you everything up front so you'll have no surprises down track. This includes possible unavoidable damages, whether or not you'll need to move out and for how long.
- ✓ **Pride in our work** – Our team will do a tidy job, respect your property and clean up when we are finished
- ✓ **Working with you** - We understand your business needs to continue with minimal disruption so we will work with you as best as we can

STEP 03

Why Choose Us?

Your asbestos removal company needs to have a number of things in place to be compliant with the current Regulations. Savy Enviro Services:

- ✓ Is proud of our audited and certified Health & Safety system. We are accredited to ISO 45001 (which is required by law for Class A removalists), have a 100% pass rate in SiteWise and a 5-star rating with Impac.
- ✓ Are licensed with WorkSafe. The company holds its own license, as does each of our supervisors.
- ✓ Have qualified removalists – all workers have passed their Class A & Class B worker unit standard. All of our staff are employees, not contractors – peace of mind that we will do a quality job.
- ✓ Always wrap, transport and dispose of asbestos waste correctly. A Crush & Bury Certificate is available as proof that we have disposed of the waste at a certified landfill.
- ✓ Will provide you with a transparent quote at a reasonable price. Some companies take advantage of those who don't know the industry with their high prices, baffling small print and variations that they add in later.
- ✓ Are available! Available for a site visit, available for your questions and available to do the work within a reasonable timeframe.

STEP 04

Getting Things Rolling

Once you've approved our quote, we'll issue you with a 50% deposit invoice.

If your removal is friable (Class A) this will require an online notification to WorkSafe. From the date the online notification is submitted there is a 5 day stand down period where we are not allowed to start work. This stand down period is mandatory across the industry and is outside of our control.

Considering the notification period, we'll discuss with you and schedule the job as you need. Whether this be asap, or to work in with other trades, we'll do what we can to minimize disruption to you.

An asbestos assessor is required for Class A work, and we will liaise with the tester to have them attend site at the correct stages, from the start of the project through to clearance.

A site file will be created which contains the Health & Safety documentation needed for asbestos removal. We will compile our Site Specific Safety Plan (SSSP) and the Asbestos Removal Control Plan (ARCP), all of which is available to you if you require.

Savy Enviro Services is happy to complete your H&S Prequalification documentation, provide evidence of our robust H&S system and complete inductions as required.

STEP 05

Before Work Starts

If disconnection of services is required, this would have been discussed with you at the time of quoting. Let us know if you need us to liaise with your tradesmen so the work can be programmed to run smoothly.

A day or so out from our arrival is a good time to shift contents. We would have discussed with you at the time of our site visit what is required in this regard.

Savy Enviro Services understands your business needs to continue while the work takes place. We are happy to discuss options with you so that there is minimal disruption to your day to day operations, so long as we can remain compliant to Regulation.

STEP 06

On The Day

Savy Enviro Services will attend site at the agreed time and establish the site. During our time on site, no unauthorised persons can be in the vicinity.

A toolbox meeting will be had between the staff and the plan communicated to the team. All of our H&S correspondence is sent back to our office via our customised H&S app.

For friable work site establishment includes setting up barriers (tape/fencing), signage and a 4-stage decontamination unit as well as building an enclosure around the asbestos we are removing.

Once the removal area is set up, our supervisor will carry out a smoke test to ensure there are no leaks in the enclosure.

The asbestos assessor will attend to set up their air monitoring pumps

which will run every day that removal is undertaken. This is called 'Control Monitoring' and the pumps placed at the NPU and at the entrance to the removal area will check that there are no fibres escaping from the enclosure during our removal work.

Once the asbestos removal has been completed, the tester will run 'Clearance Monitoring' where the pumps are placed inside the now clean enclosure and are run whilst no one is on site. This checks for any fibres left in the air.

They will undertake a comprehensive visual inspection and swabs of the surfaces.

Once the lab has confirmed to the tester that all swabs and air monitoring

is clear, we will reattend site and pack down, removing our enclosure and equipment from the site.

When the enclosure and equipment is removed from site, the tester will attend once more to do a final visual inspection.

The tester will then give a confirmation of clearance, issuing their report shortly after (1-2 days depending on the company). At this point you will be able to move back into the area and continue with any other works.

We'll send you a same-day invoice via email once the work is complete.

H&S correspondence, completed documentation and photographs are available to you if requested, through Google Drive access into your job file.
